

Psoriasisum[®] Vital Moor Cream

according to Prof. Dr. med. habil. Julian

Created after twelve years of research and development. The active ingredient in the product is obtained from peloid (moor or peat mud), a genuinely natural product without any chemical contents. It is a natural product of the very highest quality which acts on the pain receptors (adreno / dopamine / histamine receptors). The active ingredients have anti-inflammatory qualities whilst also providing pain relief and reducing swelling. They help to prevent further degeneration of the articular cartilage, relieve pain in the joints, preserve mobility and minimise disability.

The biologically active substances enter the body and take effect in the damaged regions of the joints.

Classification as a medical product:

Arnsberg Regional Government

Pilot study: Department of Natural Medicine

Clinical studies at the Department of Natural Medicine,
Klinik Blankenstein in Hattingen, 2008-2012

Gonarthrosis and Periarthropathia humeroscapularis
(arthritis of the knee joint, frozen shoulder and wry)

For use in cases of:

- Arthritis of the knee joint
- Arthritis of the hip joint
- Arthritis of the ankle joint
- Arthritis of the shoulder/finger joints
- Arthritis of the base joint of the big toe
- Psoriasis
- Neurodermatitis

Application

We recommend a course of eight weeks' treatment with our moor cream. Use only in small amounts. Apply at least twice a day; rub in gently and let it absorb. Keep rubbing until all traces of brown colour have disappeared.

Side effects: none known

Do not use in cases of: acute severe inflammation

Package sizes: 200ml with pressure pump

Art. No. S 0604

Pharmaceutical Central Number: 9759525
